Software Engineer focused on solving customer problems. Six years at AMFG, from Junior to Team Lead, building the automation, scheduling, and integration surfaces behind a platform used by 100+ manufacturers and machine shops. I love helping people and work in teams when we can achieve big goals together. Really like Agentic Workflows with AI and building great architectures. When I was a teen, I thought that I would be a backend engineer because frontend is easy and not interesting, now I enjoy both, but frontend is ♥. I'm also active on tech side of Twitter if you like my tweets we can be friends 🤝.

EXPERIENCE

May 2025 - Present	AMFG Team Lead - Leading architecture across frontend, backend, and performance for a product built by 15+ engineers, and directly managing a team of 4. 3D model similarity search: designed and built the engine that surfaces previously quoted models with similar geometry, after estimators flagged manual geometry analysis as a top time sink - cut an estimate from 15-20 minutes to about a minute; embeddings indexed with pgvector, tuned for recall vs latency. - Public API and MCP server: shipped the integration surface that lets customers and their AI agents drive AMFG workflows programmatically, replacing in-app data export - scoped the first endpoints with customers directly, then expanded the API release by release as their integrations grew. - Frontend replatform: led the Kendo to shadcn/ui and Tailwind CSS migration component by component so releases never froze, trading a rigid third-party library for primitives we own and iterate on freely. - CI pipeline: cut test suite runtime 5x, 20 min to 4, by reworking how tests provision and isolate database state - the bottleneck was per-test setup, not the tests. - Tooling: replaced Prettier with oxfmt and ESLint with oxlint, cutting format and lint in CI 30x.
October 2020 - April 2025	AMFG Fullstack Software Engineer (Junior to Senior) - Customer scripting runtime: built the sandboxed environment running customer-authored Python and JavaScript, solving isolation and resource limits for untrusted multi-tenant code - unlocked chained sequences of 10+ actions the fixed trigger system could not express. - Workflow automation: built the event-trigger system supporting 10+ follow-up action types across email, push, and status changes, generalising recurring customer requests into rules they configure themselves. - Scheduling Gantt: built the custom drag-and-drop timeline that schedules 10,000+ builds a month as most customers' primary production tool, replacing manual scheduling - the hard part was reconciling concurrent edits from multiple planners without losing work. - Drove team-wide adoption of AI-assisted workflows and ran 50+ interviews shaping hiring standards.

PROJECTS

01	GLASSCN  SHADCN/UI, GLASSMORPHISM, COMPONENT LIBRARY	A library of Apple-like glass components for shadcn/ui, with 20+ glass-styled primitives, 5 glass effect variants for dark and light themes, clear surfaces, and SVG-based physical refraction for realistic light bending through thick glass.
02	MELLOW LINES  CANVAS, SHIKI, FFMPEG WASM	A code animation studio that turns code snippets into cinematic videos entirely in the browser.
03	MELLOW FMT  TANSTACK START, FORMATTING TOOL	An interactive playground for exploring and comparing Prettier and Oxfmt formatting options.
04	ALEX POSTS TECHNICAL WRITING	A technical blog with deep dives into database internals, React mechanics, and JavaScript tooling.

PEOPLE & COMPANIES I LOOK UP TO

Theo · Tanner Linsley · Guillermo Rauch · Lee Robinson · Ryo Lu · Pauline P. Narvas · shadcn · OpenAI · SpaceX · Lovable

TECHNICAL TASTE

TypeScript, Next.js, Bun, Vercel, TanStack, Drizzle, shadcn, OpenAI, T3 Code

ADDITIONAL INFO

I like to create beautiful UIs, like to dress well, and like NBA and football. I'm a big dog lover - have one myself, named Theo. I used to run and a lot, and had run a half-marathon back in the day. I love rap festivals, I was at Rolling Loud and others, saw Travis Scott, Playboi Carti and some more, planning on visiting more. Trying to be happy and make people around me happy too.

KEY SKILLS & TOOLS

Languages: TypeScript, JavaScript, SQL
Frontend: React, all TanStack, Next.js, Tailwind CSS, shadcn/ui
Backend: Node.js, Bun, PostgreSQL, MySQL, Redis
Tooling: oxc, Vite, Vitest

EDUCATION & CERTIFICATIONS

National Technical University of Ukraine “Igor Sikorsky Kyiv Polytechnic Institute”
Faculty of Informatics and Computer Engineering
Bachelor Degree, Computer Engineering, 2017 - 2021
